We are so confident in the quality of our software that we will allow you to try it FREE. We are so sure that we offer the most cost effective system that, unlike our competitors, we don't hide our prices.

Road Haulage Fleet Software

FleetServe software does more than just keep a database of your vehicles and plant equipment. It's highly flexible, quick and simple to use and offers all the functionality needed to maintain your fleet of vehicles and plant.

Complete Vehicle Management

Manage vehicles and scheduled maintenance at the click of a mouse. With very little typing required.

Flexible Reminder System

Fully automated and configurable email and SMS reminder system to ensure requirements and service intervals are never missed.

Visual Scheduling

Calendar style colour coded visual reminder of upcoming service requirements by day, week or month.

Parts Management

Maintainable products and services database included with multiple pricing options.

Wide range of Integrations

The ability to integrate with SkipTrak, RoadTrak, HireTrak and 3rd party parts suppliers to maintain an up to date inventory.

Add-On Hand-Held System

Speed up your procedures with digital job scheduling, stock control and real-time updates to your head office. The system is ideal for haulage and plant hire businesses where service scheduling and record keeping is required. Using the graphics based scheduler and SMS reminders all service requirements can be managed effectively.

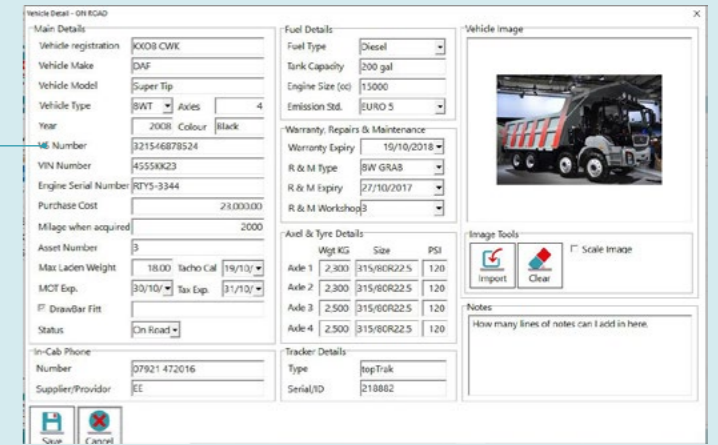

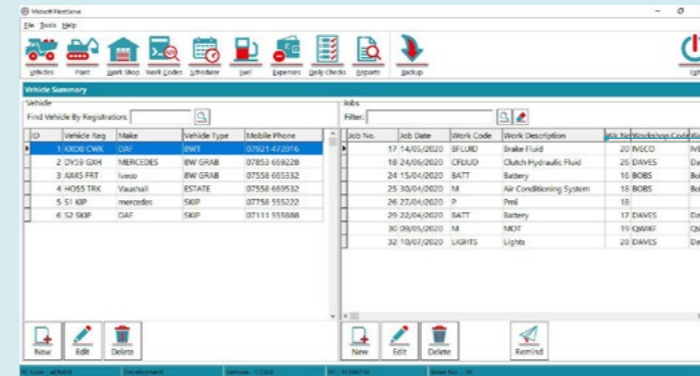

All of our products come with FREE technical support for the first 12 months, a quick-start guide and an online manual. On-site installation and training is available on request.

How It Works

Whether you're evaluating our trial version or simply want to see how our software works, the following sample screenshots will show how.

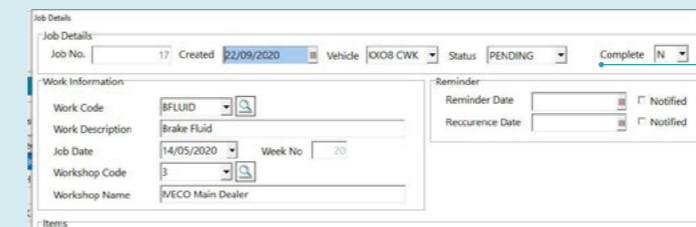

Vehicle Details Screen

- Start by entering the details of each vehicle or plant item into the database including a picture for easy identification.

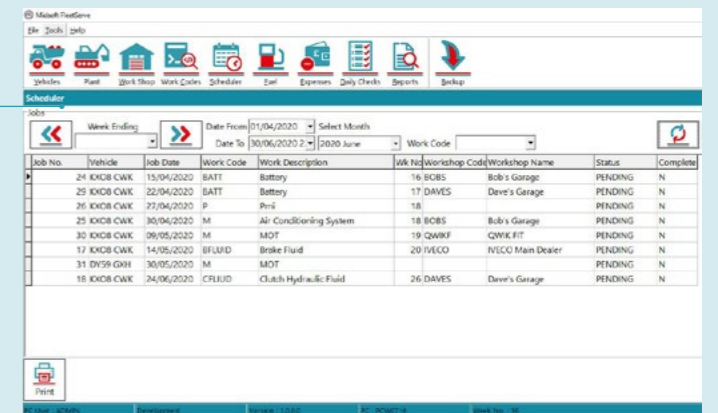

Scheduler

- Get a 360° overview of your service and repairs from a range of different perspectives.
- View your daily or weekly schedule of work in an easy-to-understand calendar style format.

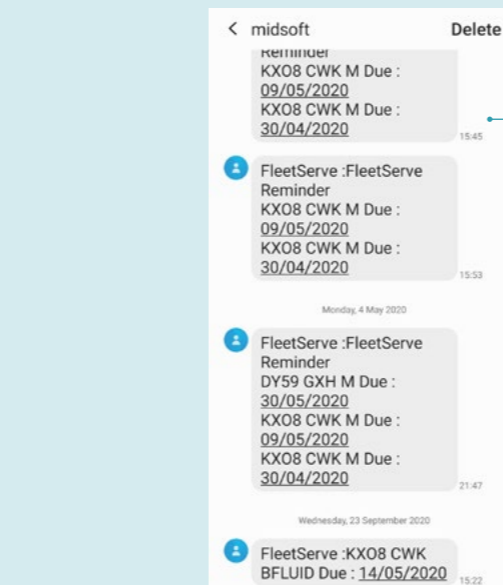

Vehicle Summary

- A searchable database of all vehicles within your fleet

Job Details

- Editable job raising screen for raising new jobs or amending existing ones
- Allocate jobs to engineers or workshops
- Set the reminder schedule and frequency

SMS Reminder

- Along with email reminders FleetServe also has an automated SMS reminder for upcoming planned maintenance and servicing

Starting from only
£1995

Integration

We realise that many companies provide other services. At Midsoft we have created a whole suite of systems that can be used on their own or integrated with each other.

We can integrate with SkipTrak, RoadTrak and HireTrak and also 3rd party parts suppliers.

Installation

Installing our software is so simple we offer potential customers a free trial to prove it. Although we offer a full on-site installation and training service, many customers opt to install the software themselves. You can be up and running within 60 minutes by just removing our trial data and spending a few minutes setting things up. You can call us if you get stuck as the software includes 12 months technical support which is renewable each year.

Support

It doesn't matter how good and easy to use software is, users will still need to discuss problems or may require additional assistance. Our support is second to none. All our software incorporates a remote support system, so not only can you talk to a friendly, knowledgeable person you can show them the problem and they usually fix it or explain it to you while you are online.

How to buy

Simply call or e-mail us. After we arrange payment we issue you with a serial number to unlock your Trial version.

Bespoke Programming

Although we believe our off the shelf systems offer the best features, there are times when our customers require something more tailored to their own business. We have a portfolio of 20 years worth of systems to draw from when starting new projects. This means that we never have to start completely from scratch, so we can borrow from other systems that have been working for years. All this ensure that we can have your system up and running quicker than the competition and with fewer problems. Usually customers see something they like in one of our existing Systems and use that as a base to work from. If you require something more suited to your own business contact us for a free demonstration and quotation.
